PROFESSIONAL EXPERIENCE

Frontend | 2025

TCCINE - Audiovisual Services Platform

- Developed the interface using React with reusable components, facilitating project maintenance and evolution over time. Chose Vite due to its fast build and efficient hot reload, accelerating development and allowing for constant iterations. Structured the layout with semantic HTML and modular CSS, making visual adjustments simpler and more accessible for other teams. Applied Media Queries to ensure full responsiveness across desktop and mobile devices. Integrated Formspree for form submissions, reducing solution complexity and eliminating the need for an initial backend, which lowered costs and accelerated delivery.
- Transformed the promotion of audiovisual services into a clear, easy-to-use platform, connecting clients and professionals through simple and direct navigation. Developed the project with a focus on facilitating future improvements and adaptations without overcomplicating the system base. Deployed using Vercel with a custom domain, ensuring fast, stable delivery and a professional appearance.

Full Stack | 2026

Wilson Hair (MVP) - Management System for Salons and Barbershops

- Developed a system to automate scheduling in salons and barbershops, replacing manual processes with a simple, organized digital experience. Used FastAPI for the backend and React with Vite for the frontend to guarantee a stable, easy-to-maintain application ready for evolution, featuring an intuitive and well-structured interface.
- Created a step-by-step scheduling flow that reduces errors and improves the customer experience, while implementing different access levels for administrators, professionals, and clients. Developed the project as an MVP, allowing for rapid business validation and facilitating future enhancements without major changes to the foundation.

EDUCATION AND CERTIFICATES

Federal University of Pará | 2025 - 2029

Information Systems (Undergraduate)

Bolsa Futuro Digital | 2024 - 2025

Python Backend Development

Alura | 2026

Data Analysis
